In re Application of: Edward R. Fyfe  
For: Coating and Method for Strengthening a Structure  
Serial No: 10/072,677  
Filed: Feb. 7, 2002  
Group: 1771  
Examiner: Ruddock

Hello Ula—I know you have probably entered your amendment, but the inventor asked if I would see if the word "polyurea" could be added to the first dependent claim, as in the attached sheets.

Polyurea is supported in the spec on page 5, line 28.

The attached sheets of claims are my interpretation of how the claims could be re-written to include "two-component formulation that reacts upon mixing to become an elastomer" in the first claim. I know you may have done it differently.

Thanks for considering this. The inventor is generally pleased with your amendment.

Mary Jo Redman

FOR THE PERSONAL AND CONFIDENTIAL USE OF THE  
INDIVIDUAL OR COMPANY NAMED ABOVE

This transmittal may be a confidential attorney-client communication or may otherwise be privileged and confidential. If the reader of this transmittal is not the intended recipient or an agent responsible for delivering it to the intended recipient, you are hereby notified that you have received this transmittal in error and that any review, dissemination, distribution, or copying of this transmittal is prohibited. If you have received this in error, please notify us immediately by telephone and return the original transmittal to us by mail. Thank you for your consideration in this important matter.

## CLAIMS PER EXAMINER'S AMENDMENT

## 1. In combination:

a structure that includes a wall having a surface; and  
a composite coating adhering to said surface of said wall for increasing the  
resistance to explosion forces of said structure; comprising:  
a first layer; comprising:  
an elastomer in intimate contact with and adhering permanently to  
said surface of said wall;  
a second layer; comprising:  
an elastomer in intimate contact with and adhering permanently to  
said first layer; and  
textile embedded between said first and second layers; wherein said elastomer is the  
product of a fluid precursor that cures in ambient conditions to form said elastomer; AND  
WHEREIN SAID FLUID PRECURSOR IS A TWO-COMPONENT FORMULATION THAT  
REACTS UPON MIXING TO BECOME AN ELASTOMER; and wherein said composite  
coating functions to increase the apparent ductility and elongation of the wall when sudden  
lateral or explosive force is applied to the structure.

2. The combination of claim 1, wherein said fluid precursor reacts upon mixing to become  
polyurethane OR POLYUREA elastomer.

3. The combination of claim 1, wherein said two-component formulation is applied to said  
surface by spraying.

4. The combination of claim 1, said textile comprising a fabric including yarns of glass, carbon,  
polyaramid, or polyimide.

5. The combination of claim 4, wherein said yarns are woven with adjacent parallel yarns spaced  
apart one-sixteenth of an inch to one inch so as to create openings in said textile penetrable by  
said fluid precursor.

6. The combination of claim 1, said second layer further including means for rendering said  
coating fire-resistant.

2/3

7. The combination of claim 1 wherein: said composite coating covers substantially the entire said surface of said wall.

8. The combination of claim 1 wherein: said composite coating covers a portion of each of two said walls and an interior angle connecting said two walls; and further including:

a coving installed in the vertex of the interior angle, for supporting said composite coating in forming a curve having a radius of 0.4 inch or greater.
